

HARDWARE

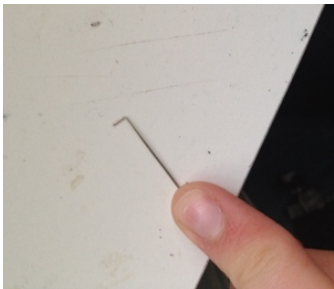

Make your own buckles and rug hardware with this new quick and easy tutorial! It's so easy to make your own hardware and being able to make your own buckles opens the door to thousands more possibilities for tack! I hope you enjoy this new tutorial ☺

You will need:

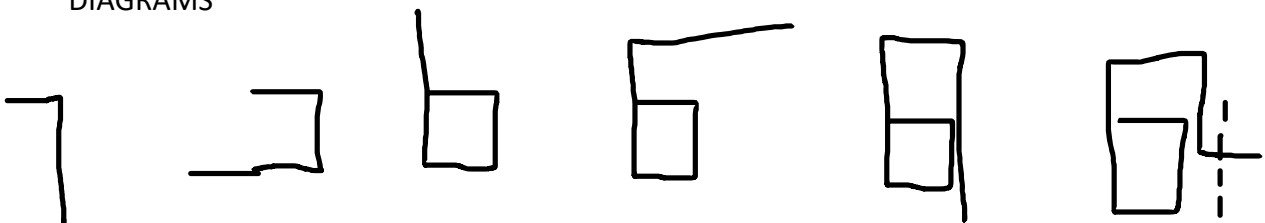

- Wire
- Wire cutters
- Pliers of various shapes and sizes (I use needle nose and long nose)

BUCKLES

1. Bend the end of your wire at a 90-degree angle
2. Continue bending so you now have 3 sides of a rectangle, with one side slightly shorter than the rest
3. Continue bending round the rectangle, bending at another 90-degree angle, leaving this next side a bit longer before bending again.
4. Finish it off by bending again to join the sides. Cut it off the coil by bending the wire down toward the ground before cutting the wire as high as you can.

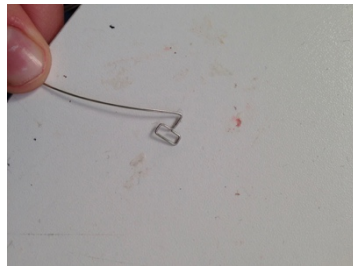

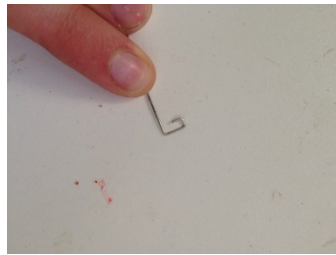

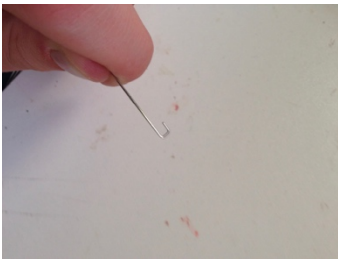

DIAGRAMS

RUG T-BAR BUCKLES

1. Bend your wire into a rectangle, the end of the wire being in the middle of the long side of the rectangle
2. Bend your wire at a 90-degree angle up before bending out a 45-degree angle
3. Bend the wire back on itself, before continuing into a V shape
4. Bend the wire again back on itself, before bending it out, and cutting it off.
